Buttons do not have an accessible name

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. [Learn how to make buttons more accessible] (<https://dequeuniversity.com/rules/axe/4.12/button-name>).

Heading elements are not in a sequentially-descending order

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. [Learn more about heading order] (<https://dequeuniversity.com/rules/axe/4.12/heading-order>).

Form elements do not have associated labels

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. [Learn more about form element labels] (<https://dequeuniversity.com/rules/axe/4.12/label>).

Links do not have a discernible name

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. [Learn how to make links accessible] (<https://dequeuniversity.com/rules/axe/4.12/link-name>).

Reduce unused CSS **Est savings of 137 KiB**

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/>).

Links are not crawlable

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. [Learn how to make links crawlable] (<https://support.google.com/webmasters/answer/9112205>).

Page is blocked from indexing

Search engines are unable to include your pages in search results if they don't have permission to crawl them. [Learn more about crawler directives] (<https://developer.chrome.com/docs/lighthouse/seo/is-crawlable/>).

robots.txt is not valid **1 error found**

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. [Learn more about robots.txt] (<https://developer.chrome.com/docs/lighthouse/seo/invalid-robots-txt/>).

Page prevented back/forward cache restoration **3 failure reasons**

Many navigations are performed by going back to a previous page, or forwards again. The back/forward cache (bfcache) can speed up these return navigations. [Learn more about the bfcache] (<https://developer.chrome.com/docs/lighthouse/performance/bf-cache/>)

Use efficient cache lifetimes **Est savings of 1,548 KiB**

A long cache lifetime can speed up repeat visits to your page. [Learn more about caching] (<https://developer.chrome.com/docs/performance/insights/cache/>).

Forced reflow

A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

LCP request discovery

[Optimize LCP](<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

Modern HTTP **Est savings of 1,080 ms**

HTTP/2 and HTTP/3 offer many benefits over HTTP/1.1, such as multiplexing. [Learn more about using modern HTTP](<https://developer.chrome.com/docs/performance/insights/modern-http>).

Network dependency tree

[Avoid chaining critical requests](<https://developer.chrome.com/docs/performance/insights/network-dependency-tree>) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

Render-blocking requests **Est savings of 1,250 ms**

Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (<https://developer.chrome.com/docs/performance/insights/render-blocking>) can move these network requests out of the critical path.

Speed Index **4.8 s**

Speed Index shows how quickly the contents of a page are visibly populated. [Learn more about the Speed Index metric](<https://developer.chrome.com/docs/lighthouse/performance/speed-index/>).

First Contentful Paint **2.5 s**

First Contentful Paint marks the time at which the first text or image is painted. [Learn more about the First Contentful Paint metric](<https://developer.chrome.com/docs/lighthouse/performance/first-contentful-paint/>).

Largest Contentful Paint **3.0 s**

Largest Contentful Paint marks the time at which the largest text or image is painted. [Learn more about the Largest Contentful Paint metric](<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-largest-contentful-paint/>)

Image elements do not have explicit `width` and `height`

Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions](https://web.dev/articles/optimize-cls#images_without_dimensions)

Minify CSS **Est savings of 27 KiB**

Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

Minify JavaScript **Est savings of 9 KiB**

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn how to minify JavaScript] (<https://developer.chrome.com/docs/lighthouse/performance/unminified-javascript/>).

Reduce unused JavaScript **Est savings of 257 KiB**

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript] (<https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/>).

Improve image delivery **Est savings of 677 KiB**

Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size] (<https://developer.chrome.com/docs/performance/insights/image-delivery>)

Time to Interactive **3.0 s**

Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric] (<https://developer.chrome.com/docs/lighthouse/performance/interactive/>).

Max Potential First Input Delay **110 ms**

The maximum potential First Input Delay that your users could experience is the duration of the longest task. [Learn more about the Maximum Potential First Input Delay metric] (<https://developer.chrome.com/docs/lighthouse/performance/lighthouse-max-potential-fid/>).
