## Browser errors were logged to the console

Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. [Learn more about this errors in console diagnostic audit]  
(<https://developer.chrome.com/docs/lighthouse/best-practices/errors-in-console/>)

## Avoid large layout shifts 15 layout shifts found

These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to [windowing]  
([https://web.dev/articles/cls#what\\_is\\_cls](https://web.dev/articles/cls#what_is_cls)). [Learn how to improve CLS](<https://web.dev/articles/optimize-cls>)

## Buttons do not have an accessible name

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. [Learn how to make buttons more accessible]  
(<https://dequeuniversity.com/rules/axe/4.12/button-name>).

## Background and foreground colors do not have a sufficient contrast ratio.

Low-contrast text is difficult or impossible for many users to read. [Learn how to provide sufficient color contrast]  
(<https://dequeuniversity.com/rules/axe/4.12/color-contrast>).

## Heading elements are not in a sequentially-descending order

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. [Learn more about heading order]  
(<https://dequeuniversity.com/rules/axe/4.12/heading-order>).

## Links do not have a discernible name

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. [Learn how to make links accessible]  
(<https://dequeuniversity.com/rules/axe/4.12/link-name>).

## Minify CSS Est savings of 16 KiB

Minifying CSS files can reduce network payload sizes. [Learn how to minify CSS]  
(<https://developer.chrome.com/docs/lighthouse/performance/unminified-css/>).

## Reduce unused CSS Est savings of 82 KiB

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. [Learn how to reduce unused CSS]  
(<https://developer.chrome.com/docs/lighthouse/performance/unused-css-rules/>).

---

## Reduce unused JavaScript **Est savings of 255 KiB**

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. [Learn how to reduce unused JavaScript] (<https://developer.chrome.com/docs/lighthouse/performance/unused-javascript/>).

---

## Links are not crawlable

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. [Learn how to make links crawlable](<https://support.google.com/webmasters/answer/9112205>)

---

## Page prevented back/forward cache restoration **3 failure reasons**

Many navigations are performed by going back to a previous page, or forwards again. The back/forward cache (bfcache) can speed up these return navigations. [Learn more about the bfcache] (<https://developer.chrome.com/docs/lighthouse/performance/bf-cache/>)

---

## Use efficient cache lifetimes **Est savings of 2,005 KiB**

A long cache lifetime can speed up repeat visits to your page. [Learn more about caching] (<https://developer.chrome.com/docs/performance/insights/cache>).

---

## Layout shift culprits

Layout shifts occur when elements move absent any user interaction. [Investigate the causes of layout shifts] (<https://developer.chrome.com/docs/performance/insights/cls-culprit>), such as elements being added, removed, or their fonts changing as the page loads.

---

## Font display **Est savings of 50 ms**

Consider setting [font-display](<https://developer.chrome.com/docs/performance/insights/font-display>) to swap or optional to ensure text is consistently visible. swap can be further optimized to mitigate layout shifts with [font metric overrides](<https://developer.chrome.com/blog/font-fallbacks>).

---

## Forced reflow

A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about [forced reflows] (<https://developer.chrome.com/docs/performance/insights/forced-reflow>) and possible mitigations.

---

## Improve image delivery **Est savings of 277 KiB**

Reducing the download time of images can improve the perceived load time of the page and LCP. [Learn more about optimizing image size](<https://developer.chrome.com/docs/performance/insights/image-delivery>)

---

## LCP breakdown

Each [subpart has specific improvement strategies](<https://developer.chrome.com/docs/performance/insights/lcp-breakdown>). Ideally, most of the LCP time should be spent on loading the resources, not within delays.

---

## LCP request discovery

[Optimize LCP](<https://developer.chrome.com/docs/performance/insights/lcp-discovery>) by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading

---

## Network dependency tree

[Avoid chaining critical requests](https://developer.chrome.com/docs/performance/insights/network-dependency-tree) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load.

---

### Render-blocking requests **Est savings of 640 ms**

Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining] (https://developer.chrome.com/docs/performance/insights/render-blocking) can move these network requests out of the critical path.

---

### Speed Index **5.5 s**

Speed Index shows how quickly the contents of a page are visibly populated. [Learn more about the Speed Index metric](https://developer.chrome.com/docs/lighthouse/performance/speed-index/).

---

### First Contentful Paint **2.2 s**

First Contentful Paint marks the time at which the first text or image is painted. [Learn more about the First Contentful Paint metric](https://developer.chrome.com/docs/lighthouse/performance/first-contentful-paint/).

---

### Largest Contentful Paint **3.3 s**

Largest Contentful Paint marks the time at which the largest text or image is painted. [Learn more about the Largest Contentful Paint metric](https://developer.chrome.com/docs/lighthouse/performance/lighthouse-largest-contentful-paint/)

---

### Cumulative Layout Shift **0.37**

Cumulative Layout Shift measures the movement of visible elements within the viewport. [Learn more about the Cumulative Layout Shift metric](https://web.dev/articles/cls).

---

### Image elements do not have explicit `width` and `height`

Set an explicit width and height on image elements to reduce layout shifts and improve CLS. [Learn how to set image dimensions](https://web.dev/articles/optimize-cls#images\_without\_dimensions)

---

### Minify JavaScript **Est savings of 6 KiB**

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn how to minify JavaScript] (https://developer.chrome.com/docs/lighthouse/performance/unminified-javascript/).

---

### Time to Interactive **3.3 s**

Time to Interactive is the amount of time it takes for the page to become fully interactive. [Learn more about the Time to Interactive metric](https://developer.chrome.com/docs/lighthouse/performance/interactive/).
